Introducing

ENTERPRISE VIDEO ANALYSIS

the streamlined remote management software
for Image Vault® PRO Command.

As a business owner, you can count on your DVR system to run like a well-oiled machine, keeping tabs on your equity while you're running the shop. Since time is money, you don't want to waste yours running from location to location fixing and patching your DVR when things get dated or go wrong.

Fortunately, Image Vault offers a new innovative solution, Enterprise Video Analysis (EVA). EVA is a software add-on (available for Image Vault Version 9 and higher) that gives you control over every monitoring aspect of your stores – all from one computer, no matter the number of locations you run. EVA offers customizable reports and management through one utility designed to save you the trouble of on-site administration.

Get the inside view of not only how your DVR is running, but how your business is running as well.

SUPERIOR POLLING AND REPORTING CAPABILITIES:

• **Recorder Health**

Gone are the days of relying on managers to report a malfunctioning DVR. With EVA, you can check the status and functionality of any number of Image Vault PRO Command DVRs from one remote location.

• **Catalog Information**

Verify that all recorders on your network are storing video for an acceptable amount of time.

• **Track POS Register Totals**

Get a detailed inside view with instant POS register reporting. Track voids, totals, almost any variable you choose, with EVA's highly integrated and highly customizable reporting software.

• **View Time Percentage Reports**

Track store-manager viewing – whether they've viewed footage and how much time they've spent watching it.

• **Additional changes can be made remotely** with the click of a mouse for any or all units you choose:

- Change administrative settings
- Install patches and new software
- Configure playback settings

ADDITIONAL FEATURES:

• **Connections** Retrieve reports by store, district, region and even chain-wide via the connections menu.

• **Emailed Recipients** Email the results of reports and polled data through an easy-to-use interface.

• **Analyzer** Organize polled information as text, graphs or charts for at-a-glance analysis and evaluation.
